The dashboard highlights a rapidly growing EV market in India, with approximately 2 million EVs sold compared to 57 million conventional vehicles, resulting in an EV penetration rate of 4%. Despite its relatively low market share, the industry is expanding strongly with a national CAGR of ~55%, indicating significant future growth potential.

The market is primarily driven by electric two-wheelers, which account for over 92% of EV sales, while manufacturers such as OLA Electric and Tata Motors dominate their respective segments. Maharashtra and Karnataka lead in sales volume, whereas states like Tripura and Meghalaya are emerging as high-growth markets.

The analysis also reveals clear seasonal demand patterns, strong cost advantages of EVs over conventional vehicles, and substantial opportunities for further adoption as infrastructure and market penetration continue to improve.

State-wise Growth Analysis

- Maharashtra and Karnataka are the largest EV markets in the country, followed by Tamil Nadu and Gujarat.
- States such as Tripura, Meghalaya, Goa, West Bengal, and DNH & DD showcasing high CAGR figures, indicating emerging EV markets where adoption is accelerating rapidly from a smaller base.

EV Adoption

- Indian EV market is primarily being driven by scooters and motorcycles rather than passenger cars.
- Lower purchase costs, ease of charging, shorter commuting distances, and increasing demand from delivery and logistics companies have accelerated adoption in this segment.
- EV adoption was gaining strong momentum until 2023, but there was a slowdown or decline in 2024. Possible reasons could be reduced demand, & policy changes.
- 2023 can be highlighted as the peak growth year for the EV market.
- EVs offer the lowest annual running cost and lowest cost per kilometer compared to petrol and diesel vehicles, highlighting their long-term cost advantage.
- Despite rapid growth, EV penetration remains at only 4% of total vehicle sales, suggesting that the market is still in an early adoption phase with substantial room for expansion.

Top Manufacturer

- The EV market appears to be highly concentrated, with a few manufacturers accounting for a significant share of total sales. OLA Electric leads the two-wheeler segment, while Tata Motors dominates the four-wheeler market, indicating strong brand leadership and competitive advantage.

Market Growth Trends

- National CAGR of approximately 55% indicates strong long-term market expansion.
- Emerging states such as Tripura and Meghalaya are experiencing high CAGR growth, highlighting future growth opportunities.
- EV adoption gained strong momentum through 2023, with signs of slower growth in 2024.

Seasonal Demand Patterns

- Sales peak during March, November, and February.
- March is the strongest month due to financial year-end purchases or any promotional campaigns.
- April and June show comparatively weaker demand.

From above analysis, manufacturers can align production, inventory planning, and marketing campaigns with seasonal demand fluctuations.
